

# AUDIOGRAM RESULTS Form 411

Client Name : mmmmmmmmm  
 Employer Name : Mineral Resources  
 Audiometric Officer Name : 1111  
 Date of Audiometric Test : 02/12/2014

DOB : 02/01/1991

Test Centre: REDiMED

Here are the results of your hearing test and what they mean.

What is an audiogram?

An audiogram shows the softest level at which a person can hear a range of different pure tones.

Here is your audiogram:

Hearing Level dB

Frequency (Hz)	500Hz	1000Hz	1500Hz	2000Hz	3000Hz	4000Hz	6000Hz	8000Hz
Right Ear (dB)	1	1		1		1		1
Left Ear (dB)	1	1		1		1		1

## Audiogram

Frequency in Hertz (Hz)

Normal hearing falls between 0dB and 20dB. If your O's and X's (representing your right and left hearing thresholds) are within this range you are said to have normal hearing. If the thresholds are below the 20dB line you have some degree of hearing loss - the further down the chart the greater the degree of hearing loss.

Degrees of hearing loss are defined as:

Mild Loss: 25-45dB  
 Moderate Loss: 45-65dB  
 Severe Loss: 65-90dB  
 Profound Loss >90dB

All the major sounds of speech are in the 20dB to 60dB range. If your own hearing thresholds show some degree of hearing loss you may have difficulty hearing some speech sounds some of the time (and other environmental sounds as well). See your doctor or an audiologist for more information about your hearing.
